

## UNIMOP "QUALITY WITHOUT CONCESSION"

All metal detectable items are made for 'very high risk' food processing areas. Most of them are available in 4 colours, others are only available in blue.

The magnetic field is produced by using iron dust into the mall. The products are made of very strong plastic components and have a total new design. Another advantage is that these tools are anti-static.

Making your job so much easier...  
Designed with Metal Elements in the filaments, so they can be detected. Giving you peace of mind!
